Professional Summary

Enterprise IT professional with 5+ years of experience at Tata Consultancy Services supporting business-critical enterprise retail applications, with hands-on experience in SQL-based data analysis and validation, Python automation, troubleshooting and root-cause analysis. PGDM in Data Science & Analytics with practical experience in Python, Pandas, PostgreSQL, SQL and Power BI. Built analytics projects involving approximately 500K e-commerce transactions, customer segmentation, cohort analysis, revenue analysis and business performance dashboards. Experienced in breaking down business and operational problems through data analysis, collaborating with stakeholders and translating analytical findings into actionable business insights.

Professional Experience

System Engineer · Tata Consultancy Services India

Chennai · May 2021 - Present

Support business-critical enterprise retail applications and processes, investigating operational issues and maintaining SLA commitments.

- Support business-critical enterprise retail applications and processes, investigating operational issues and maintaining SLA commitments.
- Use SQL to analyse and validate business and application data, identify inconsistencies and support root-cause analysis.
- Analyse system and operational data to identify patterns, discrepancies and potential business-impacting issues.
- Develop Python automation scripts for regression checks by comparing baseline and current data tables during application version deployments.
- Collaborate with client-side Product Leads and cross-functional technical teams to understand business and technical problems, investigate issues and evaluate feasible solutions.
- Support UAT and regression-testing activities by validating application behaviour and data against expected results.
- Lead a 3-member team in coordinating support, testing and issue-investigation activities.
- Document analytical findings, investigation logic and proposed solutions and communicate them to relevant stakeholders.

Projects

Customer Retention Analytics & Revenue Recovery ·

May 2026 - Jun 2026

<https://github.com/VigneshJM1999/Customer-Retention-Analytics>

[PostgreSQL](#) [Python](#) [Pandas](#) [Power BI](#)

- Analysed approximately 500K UK e-commerce transactions to understand customer purchasing behaviour, retention and revenue contribution.
- Used SQL and Python to clean, validate and analyse transaction data for customer segmentation and cohort analysis.
- Analysed customer segments and revenue patterns to identify high-value customers and key retention trends.
- Developed an interactive Power BI dashboard covering customer, retention and revenue KPIs.
- Evaluated a potential revenue-recovery scenario using explicit assumptions and documented limitations
- Translated analytical findings into business insights and recommendations.

End-to-End Retail Analytics Dashboard ·

Apr 2026 - Apr 2026

<https://github.com/VigneshJM1999/Online-Retail-Analytics>

[PostgreSQL](#) [Python](#) [Power BI](#)

- Analysed retail transaction datasets to identify revenue trends, customer contribution, product performance and seasonality.
- Used SQL and Python for data preparation, validation and exploratory analysis.
- Developed interactive Power BI dashboards for reporting and KPI analysis.
- Investigated customer, product and revenue patterns to identify trends and business opportunities.
- Presented analytical findings through concise KPI-focused reporting.

PostgreSQL

- Developed SQL queries using CTEs, window functions, self joins, subqueries and complex aggregations to solve business analysis problems.
- Analysed customer segmentation, revenue contribution, customer retention and month-over-month trends.
- Applied SQL-based data-quality checks to validate analytical outputs.
- Translated business requirements into SQL queries and interpreted results to generate business findings.

Education

Post Graduate Diploma in Management · Data Science & Analytics · Great Lakes Institute of Management	3.95 · Jan 2026 - Apr 2026
B.E. · Mechanical Engineering · Chennai Institute of Technology	7.92 · Sep 2017 - Apr 2021

Skills

SQL & Data Analytics

Advanced SQL, PostgreSQL, Oracle, Data Analysis, Data Validation, Exploratory Data Analysis, Data Modelling

Programming

[Python](#) [Pandas](#) [NumPy](#) [Python Automation](#)

BI & Reporting

[Power BI](#), [DAX](#), [Dashboard Development](#), [Data Visualization](#), [KPI Reporting](#)

Business & Analytical

[E-commerce Analytics](#), [Retail Analytics](#), [Customer Analytics](#), [Revenue Analysis](#), [Business Analytics](#), [Root Cause Analysis](#), [Problem Solving](#), [Stakeholder Management](#)

Testing & Quality

[UAT](#), [Regression Testing](#), [Data Quality Validation](#)
